The works will generally consist of the construction of rock fill embankments at the perimeter of the BRDA, offset internally and founded on the previously deposited and farmed bauxite residue, in 2 m high vertical lifts. The proposed development will result in the footprint of the BRDA decreasing as it increases in height. The increase in capacity of the SCDC will provide for the storage of an additional c. 22,500 m³ of salt cake. Additional works include a c.3.9ha expansion of the permitted borrow pit (Limerick City and County Council Ref. 17/714; An Bord Pleanála Ref. Further works include upgrades to the water management infrastructure to accommodate the BRDA development; the continued use of a stockpile area for rock and top-soil storage to the south east of the BRDA; use of top-soil and rock materials for the landscaped restoration and closure of the BRDA (including SCDC); restoration of the extended borrow pit extraction area; lighting; spillway ramps (drainage channels); revised boundary treatments and ancillary associated works above and below ground.
